Research: Clinical Epidemiology (190345)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

All students who intend to complete the requirements for a Master of Science in Epidemiology based on only a summer schedule, are required to undertake and complete a clinical research project at their institution under the supervision of a local mentor and a member of the Harvard faculty. Five to 12.5 tutorial credits will be granted for this research. Each student is required to submit a written paper summarizing his

or her research project. The exact content of this research project is determined by the faculty member assigned as principal advisor to the student. An appropriate content for this project might include the development of a research proposal to address a clinical question of interest, the implementation of this proposal with the collection of patient data, the analysis of these data, and the creation of a publishable manuscript (with detailed appendices) to describe the results of the analysis. Alternatively, part of this project might pertain to the creation of a full-fledged RO1 study protocol in the National Institutes of Health format, a publishable paper based on the analysis of existing data, a decision analysis, or a cost-effectiveness analysis.

Course Activities: Supervised research. Written progress reports must be submitted each semester.

Research: Clinical Epidemiology (190345)

Instructor TBD

2014 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 1998

All students who intend to complete the requirements for a Master of Science in Epidemiology based on only a summer schedule, are required to undertake and complete a clinical research project at their institution under the supervision of a local mentor and a member of the Harvard faculty. Five to 12.5 tutorial credits will be granted for this research. Each student is required to submit a written paper summarizing his or her research project. The exact content of this research project is determined by the faculty member assigned as principal advisor to the student. An appropriate content for this project might include the development of a research proposal to address a clinical question of interest, the implementation of this proposal with the collection of patient data, the analysis of these data, and the creation of a publishable manuscript (with detailed appendices) to describe the results of the analysis. Alternatively, part of this project might pertain to the creation of a full-fledged RO1 study protocol in the National Institutes of Health format, a publishable paper based on the analysis of existing data, a decision analysis, or a cost-effectiveness analysis.

Course Activities: Supervised research. Written progress reports must be submitted each semester.

Earl Cook

2017 Fall (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 1998

All students who intend to complete the requirements for a Master of Science in Epidemiology based on only a summer schedule, are required to undertake and complete a clinical research project at their institution under the supervision of a local mentor and a member of the Harvard faculty. Five to 12.5 tutorial credits will be granted for this research. Each student is required to submit a written paper summarizing his or her research project. The exact content of this research project is determined by the faculty member assigned as principal advisor to the student. An appropriate content for this project might include the development of a research proposal to address a clinical question of interest, the implementation of this proposal with the collection of patient data, the analysis of these data, and the creation of a publishable manuscript (with detailed appendices) to describe the results of the analysis. Alternatively, part of this project might pertain to the creation of a full-fledged RO1 study protocol in the National Institutes of Health format, a publishable paper based on the analysis of existing data, a decision analysis, or a cost-effectiveness analysis.

Course Activities: Supervised research. Written progress reports must be submitted each semester.

Sonja Swanson
Anna Oberg
I-Min Lee
Brian Healy
Pagona Lagiou
Deborah Blacker

2017 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Students in the Master of Public Health in Epidemiology (MPH-EPI) Program develop an offsite practicum under the supervision of a Harvard University faculty member, often from but not restricted to, the Harvard T.H. Chan School of Public Health. This practicum may include aspects of epidemiology, biostatistics, decision sciences, or other quantitative aspects of public health. Students apply the competencies learned

in core courses to an actual investigation that they select. During the first year of the program members of the MPH-EPI Practicum Committee assist the students in selecting an appropriate practicum topic and identify the Harvard mentor for it. This is accomplished by small-group and individual meetings with students while on campus in June of the first year, followed by online video-conference meetings during the subsequent year. Once students finalize the topic for the practicum, they submit one-page description of the practicum, along with name(s) of suggested mentors to the MPH-EPI Practicum Committee. Once approved, the committee recruits the mentor for the practicum, who works with the student to complete the practicum by the end of the second year of the program. This exercise will culminate with an on-campus presentation of the results of the practicum in May of the second year prior to graduation.

Course Restricted to students in the 2nd year of the MPH-EPI program.

Requirements: **HSPH: EPI330**

Students in the Master of Public Health in Epidemiology (MPH-EPI) Program develop an offsite practicum under the supervision of a Harvard University faculty member, often from but not restricted to, the Harvard

T.H. Chan School of Public Health. This practicum may include aspects of epidemiology, biostatistics, decision sciences, or other quantitative aspects of public health. Students apply the competencies learned in core courses to an actual investigation that they select. During the first year of the program members of the MPH-EPI Practicum Committee assist the students in selecting an appropriate practicum topic and identify the Harvard mentor for it. This is accomplished by small-group and individual meetings with students while on campus in June of the first year, followed by online video-conference meetings during the subsequent year. Once students finalize the topic for the practicum, they submit one-page description of the practicum, along with name(s) of suggested mentors to the MPH-EPI Practicum Committee. Once approved, the committee recruits the mentor for the practicum, who works with the student to complete the practicum by the end of the second year of the program. This exercise will culminate with an on-campus presentation of the results of the practicum in May of the second year prior to graduation.

Course Restricted to students in the 2nd year of the MPH-EPI program.

Requirements: **HSPH: EPI330**

Fundamentals of Epidemiology (190351)

Albert Hofman

Stefania Papatheodorou

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 77

This course will provide an orientation to epidemiology as a basic science for public health and clinical medicine. It will address the principles of the quantitative approach to clinical and public health problems. The course will discuss measures of frequency and association, introduce the design and validity of epidemiologic research, and give an overview of data analysis. This course is an introduction to the skills needed by public health professionals and clinicians to interpret critically the epidemiologic literature. It will provide students with the principles and practical experience needed to initiate the development of these skills. Lectures are complemented by weekly 2-hour seminars held on Thursday or Friday, and devoted to case studies, exercises, or critique of current examples of epidemiologic studies.
Course is mutually exclusive with EPI200, EPI201, EPI208, EPI505, ID200, and ID538. You may not take both this course and any of those courses.

Requirements: **Course is mutually exclusive with EPI200, EPI201, EPI208, EPI505, ID200, and ID538. You may not take both this course and any of the listed course.**

Epidemiology 500 Section: 1

Fundamentals of Epidemiology (190351)

Instructor TBD

2012 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 150

This course will provide an orientation to epidemiology as a basic science for public health and clinical medicine. It will address the principles of the quantitative approach to clinical and public health problems. The course will discuss measure of frequency and association, introduce the design and validity of epidemiologic research, and give an overview of data analysis. This course is an introduction to the skills needed by public health professionals and clinicians to interpret critically the epidemiologic literature. It will provide students with the principles and practical experience needed to initiate the development of these skills. Lectures are complemented by seminars devoted to case studies, exercises, or critique of current examples of epidemiologic studies.

Dynamics of Infectious Diseases (190352)

Caroline Buckee

2021 Spring (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 36

This course covers the basic concepts of infectious disease dynamics within human populations. Focus will be on transmission of infectious agents and the effect of biological, ecological, social, political, economic forces on the spread of infections. We will emphasize the impact of vaccination programs and other interventions. The dynamics of host-parasite interaction are illustrated using basic mathematical modeling techniques. A key component of the course is the introduction to the programming mathematical modeling techniques. A key component of the course is the introduction to the programming language R, which we will use for all mathematical modeling activities and examples.

Course Activities: In-class demonstrations and practical sessions, written homework assignments and final class debate. Previous coursework in epidemiology and programming helpful but not required.

Students outside of HSPH must request instructor permission to enroll in this course

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Biology and Epidemiology of Antibiotic Resistance (190353)

Marc Lipsitch
Gili Regev-Yochay

2020 Spring (2.5 Credits) **Schedule:** MTWRF 0945 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 20

This course will cover concepts and issues in bacterial antibiotic resistance relevant to epidemiologic research in this field. The student will obtain understanding of the significance of the problem, the biology and mechanism of antibiotic resistance, risk factors for spread and measures to prevent this emerging problem. We will specifically assess different research designs and strategies used to measure the

magnitude, risk factors and prevention measures, and their interpretations. A few topics in antiviral resistance will also be covered.

Course Prerequisites: ID538 or [(BIO200 or ID200 or BIO201 or BIO202&203 or BIO206&207/8/9) and (EPI200 or EPI201 or EPI208 or EPI500 or EPI505)]; may not be taken concurrently.

Requirements: **HSPH: EPI502**

Epidemiology of Disorders and Diseases of Childhood and Young Adulthood (190355)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 25

This course reviews current evidence on the burden, causes, and consequences of the major disorders, diseases, and injuries during childhood, adolescence, and young adulthood. Topics include autism spectrum disorders, attention deficit hyperactivity disorder, asthma, allergies, trauma, orthopedic injuries and condition, depression, anxiety, eating disorders, obesity, sexually, transmitted infections, reproductive disorders, and early life determinations of adult disease. The course also reviews the impact of cognitive and physical development on epidemiologic methods and provides students with skills to critically analyze studies in pediatric epidemiology.
Course Prerequisites: EPI200 or EPI201 or EPI208 or EPI500 or or ID201 EPI505

Additional Course Attributes:

Epi Meths for Global Health (190356)

Instructor TBD

2012 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 48

The course will cover introductory level epidemiology and a biostatistics primer introducing basic principles of statistics, with a specific focus on problems related to global health. Students who take this course will fulfill the introductory level course requirement in epidemiology; however, it will not fulfill a course requirement for biostatistics. A key difference in this course compared with other introductory level courses in epidemiology is that it offers examples from global health to illustrate epidemiologic methods and describe statistical approaches used. At the conclusion of the course, students will have gained an understanding of how to apply basic epidemiologic methods to evaluate global health programs and to critically analyze literature focused on global health problems for the purpose of advancing program design and service provision that is evidence-based.
Course is mutually exclusive with EPI200, EPI201, EPI208, EPI500, ID200, and ID538. You may not take both this course and any of those courses.
Course restricted: Nondegree students in Global Health Effectiveness only (or instructor permission)

Challenges in Latin American Mental Health (190357)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

This course introduces students to both the epidemiology of mental disorders in Latin America and the Latin American mental health care system. Latin American mental health is presented as a crucial part of the study of global mental health. Global mental health is a burgeoning field, the importance of which is just beginning to be recognized. The course represents a unique combination of epidemiology and policy, with the goal of teaching students how to translate epidemiological research into policy action. ?Ç£Policy?Ç¥ is an umbrella term, encompassing the system of laws, regulatory measure, courses of action and funding priorities concerning mental health care promulgated by governments in Latin America. Creative thinking is encouraged through case-study assignments that require solving hypothetical policy problems in Latin American mental health. Upon completion of the course, students will not only have a deepened understanding of the challenges currently confronting Latin American mental health but will also have acquired broader skills in the translation of research into action.
Course Prerequisite(s): SBS201 or EPI200 or EPI201 or ID200

Principles of Genetic Epidemiology (190358)

Peter Kraft

Dan Chasman

2020 Fall (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 70

Introduces the basic principles and methods of genetic epidemiology. After a brief review of history of genetic epidemiology, methods for the study of both high penetrance and low penetrance alleles, as well as other high throughput genomic data will be described and discussed. Methods of analysis of genome-wide association studies are a particular focus. Examples of contribution of genetic analysis to major diseases will be reviewed.

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM

Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Prerequisites: [EPI201 and (EPI202 or BST210)] or PHS2000A or BST213.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetic Epidemiology (190358)

Peter Kraft

Dan Chasman

Liming Liang

2017 Fall (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 70

Introduces the basic principles and methods of genetic epidemiology. After a brief review of history of genetic epidemiology, methods for the study of both high penetrance and low penetrance alleles, as well as other high throughput genomic data will be described and discussed. Methods of analysis of genome-wide association studies are a particular focus. Examples of contribution of genetic analysis to major diseases will be reviewed.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Course Material Fee Tier	< $50

Epidemiology 507 Section: 01

Principles of Genetic Epidemiology (190358)

Liming Liang

Dan Chasman

Elise Robinson

2019 Fall (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 70

Introduces the basic principles and methods of genetic epidemiology. After a brief review of history of genetic epidemiology, methods for the study of both high penetrance and low penetrance alleles, as well as

other high throughput genomic data will be described and discussed. Methods of analysis of genome-wide association studies are a particular focus. Examples of contribution of genetic analysis to major diseases will be reviewed.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | EPI SM2, EPI SD, PHS-EPI

Wave 2 | CBQG SM2 & Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/15/2019 01:00PM – 08/27/2019 11:59PM

Wave 2 | 08/28/2019 12:00AM – 08/29/2019 11:59PM

Wave 3 | 08/30/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. Advanced Population & Med Genetics (190362)

Alkes Price

2021 Spring (5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 25

This course will cover quantitative topics in human population genetics and applications to medical genetics, including the HapMap project, linkage disequilibrium, population structure and stratification, population admixture, admixture mapping, and natural selection. The course is aimed at Epidemiology and Biostatistics students with a strong interest in statistical genetics, and is included in the Biostatistics Advanced Doctoral Core and Biostatistics Masters core. The course will emphasize hands-on analysis of large empirical data sets, thus requiring prior experience with a general-purpose high-level programming language such as Python or PERL. After taking this course, each student will have the experience and skills to develop and apply statistical methods to population genetic data.

Course Prerequisite(s): (I) EdX course in Python or PERL (or equivalent programming experience in Python or PERL), and (BIO227 or EPI293 or EPI507); may not be taken concurrently.

Students outside of HSPH must request instructor permission to enroll in this course

Requirements: **HSPH: EPI511**

2020 Fall (1.25 Credits) **Schedule:** T 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 34

This course focuses on methods for the analysis of data when covariates are misclassified or measured with error. It will cover theory for valid estimation and inference in this setting, as well as application of the theory to current epidemiologic studies using computer software developed for this purpose. Methods for contingency tables, generalized linear models, and survival data analysis will be addressed. Topics include likelihood-based methods and regression calibration. Examples from the Nurses' Health Study and other epidemiologic studies will be used to motivate the lectures and provide compelling and realistic examples.

Students outside of HSPH must request instructor permission to enroll in this course

Requirements: **Pre-requisites: BST 222 or EPI 205 or BST 232. EPI 205 may be taken concurrently.**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Category	Category 4: Elective
All: Cross Reg Availability	Available for Harvard Cross Registration

Epidemiology 515 Section: 1

Measurement Error and Misclassification for Epidemiologists (190365)

Donna Spiegelman

Molin Wang

2017 Fall (1.25 Credits) **Schedule:** T 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 34

This course focuses on methods for the analysis of data when covariates are misclassified or measured with error. It will cover theory for valid estimation and inference in this setting, as well as application of the theory to current epidemiologic studies using computer software developed for this purpose. Methods for contingency tables and generalized linear models will be addressed. Topics include likelihood-based methods, regression calibration and optimal study design. Examples from the Nurses' Health Study and other epidemiologic studies will be used to motivate the lectures and provide compelling and realistic examples.

Course Prerequisite(s): Requires EPI202 and EPI204 (BST222 is recommended)

Course is mutually exclusive with BIO515. You may not take both this course and BIO515.

Students outside of HSPH must request instructor permission to enroll in this course

Requirements: **HSPH: EPI515**

Additional Course Attributes:

Issues in Frailty (190366)

Marian Hannan

Andrea Schwartz

2021 Spring (1.25 Credits) **Schedule:** R 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 20

While frailty is not a medical diagnosis and has no accepted definition, it is a key and growing concern in geriatric care and research in older adults. This course will examine the thematic issues related to frailty, including the idea of frailty as the consequence of failure to compensate for physiological stress in aging adults. The sessions will start with theme of failure to compensate and how this results in frailty as an outcome and quality of life, with a focus on methodological issues. The following sessions will present geriatric syndromes thought to derive from failure to compensate for physiological stress including

delirium, sarcopenia or loss of muscle, fractures and falls, and failure in the musculoskeletal system. The impact of methodological issues, and interpretation and conclusions drawn from research in geriatric epidemiology will be emphasized. This 7-week survey course has no formal prerequisites, but some epidemiologic background or an understanding of basic epidemiologic principals is strongly recommended.

Students outside of HSPH must request instructor permission to enroll in this course

Requirements: **HSPH: HSPH Degr + PHD Stu**

Infections and Cancer (190367)

Instructor TBD

2012 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

The purpose of this course is to provide a general introduction to the issues central to evaluating the role of infections in the etiology of human malignancy. We will review the epidemiologic evidence for an infectious etiology of the major human infection-associated malignancies, as well as review design strategies and methodological approaches for the investigation of infection-related malignancies. Specifically, this course will emphasize molecular methods that can be used in population-based studies, using specific investigations of infection and cancer as practical examples. The class will be conducted as a mixture of lecture and discussion.

Evolutionary Epidemiology of Infectious Disease (190368)

William Hanage

2020 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 23

Like all living things, pathogens have evolved by natural selection. The application of evolutionary principles to infectious disease epidemiology is crucial to such diverse subjects as outbreak analysis, the understanding of how different genomic combinations of virulence and drug resistance determinants emerge, and how selection acts to produce successful pathogens that balance the costs and benefits of virulence and transmission. The goal of this course is to introduce basic evolutionary concepts, highlighting the importance of transmission to the fitness as illustrated by comparisons of the adaptive process among different sorts of pathogenic microorganisms. Students will also learn the basics of phylogenetic sequence analysis for the study of outbreaks and transmission, and the construction of simple mathematical models that probe the adaptive process.

Topics in Medical Device Comparative Effectiveness Research (190370)

Instructor TBD

2014 Fall (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 28

This course engages students in practical issues in research for medical devices. Students will learn to analyze and assess the changing role of comparative effectiveness and safety research in the medical device life cycle, identify the challenges of generating data on device benefits and risks, and design studies to meet the needs of these challenges. Students are graded on the basis of class participation and scientific debate. The course is intended primarily for graduate students whose careers might involve developing evidence on medical device safety and effectiveness or using such information for evidence-based decision making.
Course Prerequisite(s): EPI221 and (EPI200 or ID200 or ID207 or ID538 or EPI201 or EPI208 or EPI500 or EPI505)

Additional Course Attributes:

E. Orav

2020 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 65

This course will cover a wide variety of methods used to analyze epidemiologic data. It will start with a review of the basic principles of causal inference and use of causal diagrams to identify confounding. This will provide a basis for introducing regression-based methods to control for confounding, including logistic regression and propensity score analysis. The course will also cover survival analysis and Cox proportional hazards regression for time-to-event data, extensions of logistic regression (including ordinal logistic regression, multinomial logistic regression, and conditional logistic regression), and methods for developing and validating prediction rules based on regression models. Finally, the course will discuss methods for handling missing data. Students will learn to implement these analytic methods using the Stata statistical software package, and they will apply these methods to a research question by working on a group project with a publicly-available dataset.

Course Restricted: to MPH-EPI students

Analytic Methods for Epidemiology (190371)

Heather Baer

E. Orav

Earl Cook

2017 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 60

The goal of this course is to familiarize you with many of the common analytic methods used by epidemiologists to obtain valid measures of the effect of a risk factor on an outcome. It will cover the basic principles of causal inference and confounding and review stratification as a method to control for confounding. This will provide a basis for introducing regression-based methods to control for confounding, including logistic regression and its extensions (ordinal logistic regression, multinomial logistic regression, and conditional logistic regression), as well as propensity score analysis. The course also will cover survival analysis and Cox proportional hazards regression for time-to-event data. Finally, the

course will discuss methods for handling missing data. You will learn to implement these analytic methods using the Stata statistical software package.

Course Prerequisites: ID 207 (Concurrent enrollment permitted)

Investigating Outbreaks (190372)

Kayla Laserson

Elissa Wilker

2017 Fall (1.25 Credits) **Schedule:** S 0830 AM - 0520 PM
S 0830 AM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 175

The investigation of disease outbreaks both predates and gave birth to the fields of epidemiology and public health. In the modern day, tried and true epidemiologic methods persist along with new, sophisticated methods of discovery. The topic of outbreaks is also the fodder of movies and television with fictional characters playing the glamorous role of disease detectives solving ripped from the headlines situations. This course is grounded in the evidence-base and draws from the literature and field-based

experience of the instructors to create an intensive and immersive two and a half-day learning experience. Key to the success of the course are learning experiences that leads up to (developing of Epi Info skills) and follows the interactive classroom-based experience (synthesis paper).

This course focuses on the fundamental epidemiologic skills needed to investigate an outbreak investigation. Mastery of the knowledge and skills in this area along with application during the course will foster the use of problem solving frameworks and implementation strategies needed to address future outbreak situations that you may face in your career. The case examples in the course and the real-time experience of attempting to address these scenarios will illustrate the complexities and unexpected nature of outbreak investigations. The experience of working in teams will also highlight the importance of collaboration in addressing pressing public health challenges.

Students outside of HSPH must request instructor permission to enroll in this course

Class Notes: **Fall 2017 Class Meetings**
Saturday, November 11, 8:30 AM - 5:20 PM
Sunday, November 12, 8:30 AM- 5:20 PM

Requirements: **HSPH: HSPH Degr + PHD Stu**

Epidemiology 524 Section: 1

Confounding Control: A Component of Causal Inference (190373)

Sonja Swanson

2021 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 65

Controlling for confounding is a fundamental component of epidemiologic research. EPI524 describes models for confounding control (or adjustment), their application to epidemiologic data and the assumptions required to endow the parameter estimates with a causal interpretation. The course introduces students to two broad sets of methods for confounding control: methods that require measuring and appropriately adjusting for confounders, and methods that do not require measuring the confounders. Specifically, the course introduces outcome regression, propensity score methods, the parametric g-formula, inverse probability weighting of marginal structural models, and instrumental variable methods as means for confounding control.

EPI524 is designed to be taken after EPI522. The models described in EPI524 are for time-fixed dichotomous exposures and dichotomous, continuous, and failure time (e.g., survival) outcomes.

This course is for MPH-EPI students only, no exceptions
Prerequisites: EPI522 and MPH-EPI only. may not be taken concurrently

Requirements: **Prerequisite: EPI522 and MPH-EPI; may be taken concurrently**

Study Designs for Epidemiologists (190374)

Sonia Hernandez-Diaz

Issa Dahabreh

2021 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 65

This course reviews the main study designs currently used to describe, predict, and investigate the causes of adverse health outcomes in humans. We will examine general principles, interpretation, strengths, and limitations of the study designs that are commonly used for population research. The course covers ecological, cross-sectional, cohort, case-control, and case-only designs in a number of different settings. Issues related to study population identification, exposure and disease definition and ascertainment, misclassification, confounding, and generalizability are considered in the light of typically available data sources. Idiosyncrasies of several fields, from infectious disease to occupational epidemiology, and their relevance to the selection of an optimal study design are discussed. This course fulfills a core course requirement for the MPH in Epidemiology.

Analysis of Publicly Available Databases for Epidemiologic and Health Services Research (203524)

Ellen McCarthy

Sarinnapha Vasunilashorn

2020 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 41

This course addresses the use of existing public use databases to study important questions related to clinical risk factors, treatment, outcomes, and health policy. The course is designed to bridge coursework in epidemiological methods and biostatistics by providing practical experience manipulating and analyzing publicly available databases and complex surveys. Special attention is devoted to publicly available U.S. databases that are commonly used for epidemiologic and health services research and are readily available to new investigators. Such databases offer several advantages including their representative sampling designs allowing generalizability to larger populations, timeliness, and ability to evaluate trends, geographic variation, or rare conditions. Strengths and limitations of data sources will be considered. Practical issues in obtaining, linking, and analyzing databases will be emphasized throughout the course, and key statistical issues will be addressed, including appropriate analyses of complex survey designs. Students will complete programming exercises with STATA statistical software, prepare a proposal to analyze a specific research question using a public use database, and conduct analyses to address their research questions.

Students should have working knowledge of Stata, basic programming skills, and Stata IC software.

Students in the MPH-EPI program have priority enrollment in this course. If room is available, summer-only students will be allowed to enroll. Academic year students must request instructor permission.

Requirements: **Prerequisites: EPI204 or EPI236 or EPI522. Program Requirements:**

MPH-EPI or Summer-Only HSPH degree students. Instructor permission required for all other students.

Additional Course Attributes:

Earl Cook

2017 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 50

This course addresses the use of existing public use databases to study important questions related to clinical risk factors, treatment, outcomes, and health policy. The course is deisgned to bridge coursework in epidemiological methods and bistatistics by providing practical experience manupulating and analyzing publicly available databases and complex surveys. Special attention will be devoted to publicly available U. S. databases that are commonly used for epidemiologic and health services research and are readily available to new investigators. Such databases offer several advantages including their representative sampling time frames allowing generalizability to larger populations, timeliness, and ability to evaluate trends, geographic variation, or rare conditions. Strengths and limitations of data sources will be considered. Practical issues in obtaining, linking, and analyzing larges databases will be emphasized throughout the course, and key statistical issues will be addressed, including survey sampling and risk-adjustment. Students will complete programming exercises with STATA statistical software, prepare a proposal to analyze a specific research question using a public use database, and conduct analyses to address their research questions.

Prerequisites (concurrent enrollment permitted): EPI204 or EPI236 or EPI522 or permission from instructor. Working knowledge of Stata, basic programming skills, and Stata IC software.

Must also be one of the following: MPH-EPI or Summer only MPH-QM or Summer only MPH-CLE or Summer only SM1-EPI

Class Notes: **Priority registration for MPH-EPI students. Available seats will be released to students at a later date**

Requirements: **HSPH: EPI526**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Classification	Even Year Class
All: Cross Reg Availability	Not Available for Cross Registration

Epidemiology 526 Section: 1

Analysis of Publicly Available Databases for Epidemiologic and Health Services Research (203524)

Ellen McCarthy

Sarinnapha Vasunilashorn

2019 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 50

This course addresses the use of existing public use databases to study important questions related to clinical risk factors, treatment, outcomes, and health policy. The course is designed to bridge coursework in epidemiological methods and biostatistics by providing practical experience manipulating and analyzing publicly available databases and complex surveys. Special attention is devoted to publicly available U.S. databases that are commonly used for epidemiologic and health services research and are readily available to new investigators. Such databases offer several advantages including their representative sampling designs allowing generalizability to larger populations, timeliness, and ability to evaluate trends, geographic variation, or rare conditions. Strengths and limitations of data sources will be considered. Practical issues in obtaining, linking, and analyzing databases will be emphasized throughout the course, and key statistical issues will be addressed, including appropriate analyses of complex survey designs. Students will complete programming exercises with STATA statistical software, prepare a proposal to analyze a specific research question using a public use database, and conduct analyses to address their research questions.

Students should have working knowledge of Stata, basic programming skills, and Stata IC software.

Students in the MPH-EPI program have priority enrollment in this course. If room is available, summer-only students will be allowed to enroll. Academic year students must request instructor permission.

Requirements: **Prerequisites: EPI204 or EPI236 or EPI522. Program Requirements: MPH-EPI or Summer-Only HSPH degree students. Instructor permission required for all other students.**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Category	Category 3: Essential Course
HSPH: Indpt. Study / Research	NO
All: Cross Reg Availability	Not Available for Cross Registration

Epidemiology 526 Section: 1

Analysis of Publicly Available Databases for Epidemiologic and Health Services Research (203524)

Ellen McCarthy

2016 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 50

This course addresses the use of existing public use databases to study important questions related to clinical risk factors, treatment, outcomes, and health policy. Special attention will be devoted to publicly available U.S. databases that are commonly used for epidemiologic and health services research and are readily available to new investigators. Such databases offer several advantages including their representative sampling time frames allowing generalizability to larger populations, timeliness, and ability to evaluate trends, geographic variation, or rare conditions. Design and Conduct of Trials in Preventive Medicine (203526)

Howard Sesso

I-Min Lee

2020 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 45

This course is designed for students interested in the design, conduct, analysis, and interpretation of trials in preventative medicine. This course will balance current knowledge and concepts in clinical trial methodology alongside the operationalization of how to effectively conduct a trial. Students will learn the components of a trial protocol and manual of operations, and gain insights on the pragmatic aspects of trial design, management, analysis, and interpretation. We will also have students gain first-hand experience both in the design and conduct of a small-scale, short-term clinical trial, and perspective as a participant in a trial. This course will enable students to apply their knowledge to published trial findings to understand their place in clinical practice and guidelines.

Students enrolled in the MPH-EPI program have priority enrollment in this course. If room is available, summer-only students will be allowed to enroll. Academic year students must request instructor permission.

Requirements: **Prereqs: [ID207 & ID208] OR [BST202 & BST203 & EPI500 & EPI202] OR [EPI208 & BST206 & (BST207 OR BST208)] OR old ID207 (taken 2012-2014)].**

Restricted to MPH-EPI or Summer-Only HSPH degree students. Instructor permission required for other students.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Indpt. Study / Research	NO

Systematic Review and Meta-Analysis (203527)

Stefania Papatheodorou

2020 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 47

This course introduces students to the science of research synthesis. Principles and methods for conducting a systematic and quantitative review are illustrated through case studies of public health and medical issues, with emphasis on exploring sources of variation in various settings. The course will introduce research databases, reference management software, pooled estimates and sources of heterogeneity, bias, and practical applications.

Students enrolled in the MPH-EPI program have priority enrollment in this course. If room is available, summer-only students will be allowed to enroll. Academic year students must request instructor permission.

Applications of Epidemiology (205521)

Jennifer Stuart

Earl Cook

2021 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

Students enrolled in the MPH-EPI program have priority enrollment in this course. If room is available, summer-only students will be enrolled into the course from the waitlist. Summer only students may waitlist themselves without receiving instructor permission.

This course provides students with a wide variety of applications of epidemiology methods from a menu of modules that reflects active research by the members of the Department of Epidemiology at the Harvard T. H. Chan School of Public Health. Modules contain 3-4 videos (total length approximately one hour) on a common topic and are listed by the twelve Areas of Interest within the Department of Epidemiology. These include Cancer Epidemiology and Cancer Prevention, Cardiovascular Epidemiology, Clinical Epidemiology, Environmental and Occupational Epidemiology, Epidemiologic Methods, Epidemiology of Aging, Infectious Disease Epidemiology, Genetic Epidemiology and Statistical Genetics, Neuro-Psychiatric Epidemiology, Nutritional Epidemiology, Pharmacoepidemiology, and Reproductive, Perinatal, and Pediatric Epidemiology. Students are required to view the videos and complete the assignments related to eight modules chosen from the listed options.

**Course Prerequisite(s): Introductory courses in Biostatistics and Epidemiology:
ID207 and ID 208/BIO 206, BIO207 OR BIO208 and EPI 208/BIO 202 and BIO 203 and EPI 500**

Requirements: **MPH-EPI & Summer only students

Instructor Permissions: None **Enrollment Cap:** 20

This course is currently restricted to participants in the MPH in Epidemiology Program, but will be open to other degree students in the future.

This course provides students with a wide variety of applications of epidemiology methods from a menu of modules that reflects active research by the members of the Department of Epidemiology at the Harvard T.

H. Chan School of Public Health. Modules contain 3-4 videos (total length approximately one hour) on a common topic and are listed by the twelve Areas of Interest within the Department of Epidemiology. These include Cancer Epidemiology and Cancer Prevention, Cardiovascular Epidemiology, Clinical Epidemiology, Environmental and Occupational Epidemiology, Epidemiologic Methods, Epidemiology of Aging, Infectious Disease Epidemiology, Genetic Epidemiology and Statistical Genetics, Neuro-Psychiatric Epidemiology, Nutritional Epidemiology, Pharmacoepidemiology, and Reproductive, Perinatal, and Pediatric Epidemiology. Students are required to view the videos and complete the assignments related to eight modules from the listed menu.

Course Activities:

- **1.25 credits: 8 graded homework assignments and submitting either a research proposal or 6 article critiques**
- **2.5 credits: 16 graded homework assignments and submitting either 2 research proposals or 12 article critiques**

Course Prerequisite(s): First-year MPH EPI courses - ID207 and ID208 and EPI522 and EPI524 and EPI525

Requirements: **HSPH: EPI529**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
HSPH: Conditionally Approved	Conditionally Approved Course

Epidemiology 529 Section: J1

Applications of Epidemiology (205521)

Earl Cook

2018 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

Introduction to Infectious Disease Modeling (211168)

Caroline Buckee

Ayesha Mahmud

2021 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

This course will introduce students to the conception and application of infectious disease modeling in epidemiology. We will cover the global burden of infectious diseases, the dynamics of infectious diseases with different transmission routes, simple modeling approaches to understand epidemic dynamics, and the ways in which models can be used to understand the mechanisms of transmission and the impacts of interventions. Case studies will be used to familiarize students with specific applications of the theoretical models discussed. Throughout, the emphasis will be on a practical understanding of how these methods can be used and on the rigorous evaluation of the modeling literature.

Students enrolled in the MPH-EPI program have priority enrollment in this course. If room is available, summer-only students will be enrolled into the course from the waitlist. Summer only students may waitlist themselves without receiving instructor permission.

Requirements: **Program Requirements: MPH-EPI or Summer-Only HSPH degree students. Instructor permission required for all other students.**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Indpt. Study / Research	NO
HSPH: Program Affiliation	MPH-EPI

Epidemiology 542 Section: 1

Causal Mediation and Interaction (211150)

Linda Valeri

2021 Spring (1.25 Credits) **Schedule:** MTWRF 0945 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 30

The course will approach concepts and methods for mediation and interaction from the perspective of the counterfactual framework. The first part of the course will be concerned with mediation analysis, that is, assessing the extent to which the effect

of an exposure on some outcome is mediated through a particular intermediate and the extent to which it is direct or through

other pathways. Definitions, theoretical identification results and statistical techniques related to mediation analysis will be covered. The material in this part of the course will clarify the assumptions required for the estimation of direct and indirect effect and will extend the approach to mediation typically

employed in epidemiology and the social sciences to settings with interactions, non-linearities and time-varying exposures. The second part of the course will cover concepts and methods for interaction. Conceptual issues concerning interaction, effect modification and the relation and non-correspondence of statistical and mechanistic notions of interaction will be discussed. Empirical tests for biologic synergism and genetic epistasis will be discussed along with practical methods to implement such tests.

Pre-Requisites

EPI289 or EPI207 or permission of the instructor. Familiarity with counterfactuals, and linear and logistic regression will be assumed. Some exposure to inverse probability of treatment weighting, marginal structural models, and causal diagrams will be helpful. Familiarity with SAS, Stata or R will be necessary to complete the practicum.

Requirements: **Pre-Requisite: EPI 289 or EPI 207**

Additional Course Attributes:

Practicum & Culminating Experience for the MPH in Epidemiology (208093)

Heather Baer

2020 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Students in the Master of Public Health in Epidemiology (MPH-EPI) program are required to develop and conduct a supervised project (practicum) addressing a clinical or public health question of interest. This practicum may include aspects of epidemiology, biostatistics, decision sciences, or other quantitative aspects of public health. All students are assigned a Harvard faculty member to be their mentor for the practicum. The Harvard mentor can be from the Harvard T.H. Chan School of Public Health or from one of the other schools at the University.

During the first year of the program, members of the MPH-EPI Practicum Committee assist students in selecting an appropriate practicum topic and identifying the Harvard faculty member who will be their mentor for the practicum. Students then submit a brief proposal (the Learning Agreement) which must be approved by the mentor and the MPH-EPI Practicum Committee. During the second year, students have regular online meetings with their mentor to obtain guidance and feedback on the project, and they submit progress reports during the fall and spring. The practicum culminates with a presentation of the results of the practicum during a symposium in May, right before graduation.

Course Restricted to students in the 2nd year of the MPH-EPI program.

Practice and Culminating Experience for Clinical Effectiveness (Academic Year) (208078)

Daniel Singer

Heather Baer

E. Orav

2020 Fall (1.25 Credits) **Schedule:** F 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 65

EPI 946F, SECTION 1 Daniel Singer (Primary Instructor) This seminar serves as a forum for students' clinical epidemiologic research. In the process, students are exposed to a variety of research designs, analytic strategies, and content areas. There is active class discussion. Faculty emphasize methodologic issues pertinent to the class research presentation.

Course Activities: Student presentations or written assignment

Course Note: Must register in each appropriate semester; separate grade given at the end of each semester. Instructor approval required for all NON-MPH CLE students.

EPI 946F, SECTION 2 Heather Baer (Primary Instructor) This seminar is an alternative to the EPI 946 Section 1 seminar on Friday mornings and is reserved for academic-year MPH-CLE students who are unable to attend the Friday morning EPI 946F seminars due to clinical responsibilities or other unavoidable conflicts. Students in Section 2 must attend another work-in-progress research seminar in their department or division on a regular basis (at least every other week, and subject to approval by the Instructor), and they must present their own work and get feedback from faculty and colleagues. The goal is to expose students to a variety of research designs, analytic strategies, and content areas.

Course Activities: Students must participate in regular research seminars, work on their own research projects, and present their work during one semester; must do two written critiques of other students' presentations during the semester when they are not presenting.

Course Note: You must register in each appropriate semester (need 2 semesters total); separate grade

given at the end of each semester. Instructor approval required. Please contact the Dr. Baer at hbaer@bwh.harvard.edu for details about how to request approval to registers for section 1. Section 1 is the recommended option for all students.

Requirements: **Course Restricted to students in the Clinical Effectiveness (academic year) concentration.**

2019 Fall (1.25 Credits) **Schedule:** F 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 65

EPI 946F, SECTION 1 Daniel Singer (Primary Instructor) This seminar serves as a forum for students' clinical epidemiologic research. In the process, students are exposed to a variety of research designs, analytic strategies, and content areas. There is active class discussion. Faculty emphasize methodologic issues pertinent to the class research presentation.

Course Activities: Student presentations or written assignment

Course Note: Must register in each appropriate semester; separate grade given at the end of each semester. Instructor approval required for all NON-MPH CLE students.

EPI 946F, SECTION 2 Heather Baer (Primary Instructor) This seminar is an alternative to the EPI 946 Section 1 seminar on Friday mornings and is reserved for academic-year MPH-CLE students who are unable to attend the Friday morning EPI 946F seminars due to clinical responsibilities or other unavoidable conflicts. Students in Section 2 must attend another work-in-progress research seminar in their department or division on a regular basis (at least every other week, and subject to approval by the Instructor), and they must present their own work and get feedback from faculty and colleagues. The goal is to expose students to a variety of research designs, analytic strategies, and content areas.

Course Activities: Students must participate in regular research seminars, work on their own research projects, and present their work during one semester; must do two written critiques of other students' presentations during the semester when they are not presenting.

Course Note: You must register in each appropriate semester (need 2 semesters total); separate grade given at the end of each semester. Instructor approval required. Please contact the Dr. Baer at hbaer@bwh.harvard.edu for details about how to request approval to registers for section 1. Section 1 is the recommended option for all students.

Requirements: **Course Restricted to students in the Clinical Effectiveness (academic year) concentration.**

Additional Course Attributes:

Practice & Culminating Experience for Clinical Effectiveness (Summer-Only) (208090)

Heather Baer

2020 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Summer-Only CLE Master of Public Health Program students develop an off-site practicum at their home institution under the supervision of a local mentor and a member of faculty at HSPH. This practicum may include aspects of epidemiology, biostatics, decision sciences, or other quantitative aspects of public health. Students should apply the competencies learned in core courses to an actual investigation. Following the first summer course work, students must submit a written proposal for the practicum along with a letter of support from an investigator from the student's home site, indicating an agreement to act as the local mentor for the project. This proposal is reviewed and an HSPH faculty supervisor is identified. Students ordinarily would write a paper suitable for publication, a grant proposal or technical report. This exercise will culminate with a presentation in the final summer of the student's program.

Course Note: Student must attend the sessions of this course during the second and third summer (to hear other students' presentations and to present thier own project) and they are encouraged to attend their first summer as well. Regular contact between students and mentors is expected via e-mail during the year to seek advice, provide activity updates and to discuss approaches to the solution of methodological issues.

Requirements: **Course Restricted to students in the MPH summer only CLE program.**

Students should apply the competencies learned in core courses to an actual investigation. Following the first summer course work, students must submit a written proposal for the practicum along with a letter of support from an investigator from the student's home site, indicating an agreement to act as the local mentor for the project. This proposal is reviewed and an HSPH faculty supervisor is identified. Students ordinarily would write a paper suitable for publication, a grant proposal or technical report. This exercise will culminate with a presentation in the final summer of the student's program.

Course Note: Student must attend the sessions of this course during the second and third summer and they are encouraged to attend their first summer. Regular contact between students and mentors and among students is expected via e-mail during the year to seek advice, provide activity updates and to discuss approaches to the solution of methodological issues.

Requirements: **Course Restricted to students in the MPH summer only CLE program.**

Earl Cook

2019 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Summer-Only CLE Master of Public Health Program students develop an off-site practicum at their home institution under the supervision of a local mental and member of faculty at HSPH. This practicum may include aspects of epidemiology, biostatics, decision sciences, or other quantitative aspects of public health. Students should apply the competencies learned in core courses to an actual investigation.

Following the first summer course work, students must submit a written proposal for the practicum along with a letter of support from an investigator from the student's home site, indicating an agreement to act as the local mentor for the project. This proposal is reviewed and an HSPH faculty supervisor is identified. Students ordinarily would write a paper suitable for publication, a grant proposal or technical report. This exercise will culminate with a presentation in the final summer of the student's program.

Course Note: Student must attend the sessions of this course during the second and third summer and they are encouraged to attend their first summer. Regular contact between students and mentors and among students is expected via e-mail during the year to seek advice, provide activity updates and to discuss approaches to the solution of methodological issues.

Requirements: **Course Restricted to students in the MPH summer only CLE program.**

Intro to Epidemiol. & Biostat. (190743)

Brian Healy

Pamela Rist

Julie Buring

2020 Summer (7.5 Credits) **Schedule:** MTWRF 0830 AM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 70

At the conclusion of this course, students will have gained a solid understanding of basic principles and methods of epidemiology and biostatistics; learned how to apply these principles and methods to the evaluation of relevant public health questions; and developed the ability to critically analyze the epidemiologic and public health literature. Methods of instruction will include lectures, videos, seminars, exercises, and a group project. This is part of a 10 credit intensive course, and has two components: 3-weeks on campus in June, and a 6-week online component in July and August. Both ID207 and ID 208 are required to fulfill this course.

Course Restricted: MPH-EPI students only

Requirements: **HSPH: ID207**

The Summer MPH Practicum for CLE (190798)

Instructor TBD

2012 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 1998

Summer- Only CLE Master of Public Health Program students develop an off-site practicum at their home institution under the supervision of a local mental and member of faculty at HSPH. This practicum may include aspects of epidemiology, biostatics, decision sciences, or other quantitative aspects of public health. Students should apply the competencies learned in core courses to an actual investigation. Following the first summer course work, students must submit a written proposal for the practicum along with a letter of support from an investigator from the student's home site, indicating an agreement to act as the local mentor for the project. This proposal is reviewed and an HSPH faculty supervisor is identified. Students ordinarily would write a paper suitable for publication, a grant proposal or technical report. This exercise will culminate with a presentation in the final summer of the student's program.

Course Note: Student must attend the sessions of this course during the second and third summer and they are encouraged to attend their first summer. Regular contact between students and mentors and amoung students is expected via e-mail during the year to seek advice, provide activity updates and to discuss approaches to the solution of methodological issues.

This exercise will culminate with a presentation in the final summer of the student's program.

Course Note: Student must attend the sessions of this course during the second and third summer and they are encouraged to attend their first summer. Regular contact between students and mentors and amoung students is expected via e-mail during the year to seek advice, provide activity updates and to discuss approaches to the solution of methodological issues.

MPH Practicum for CLE Summer (190799)

Instructor TBD

2014 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Summer- Only CLE Master of Public Health Program students develop an off-site practicum at their home institution under the supervision of a local mental and member of faculty at HSPH. This practicum may include aspects of epidemiology, biostatics, decision sciences, or other quantitative aspects of public health. Students should apply the competencies learned in core courses to an actual investigation. Following the first summer course work, students must submit a written proposal for the practicum along with a letter of support from an investigator from the student's home site, indicating an agreement to act as the local mentor for the project. This proposal is reviewed and an HSPH faculty supervisor is identified. Students ordinarily would write a paper suitable for publication, a grant proposal or technical report. This exercise will culminate with a presentation in the final summer of the student's program.

Course Note: Student must attend the sessions of this course during the second and third summer and they are encouraged to attend their first summer. Regular contact between students and mentors and amoung students is expected via e-mail during the year to seek advice, provide activity updates and to discuss approaches to the solution of methodological issues.

Global Epidemiology of Vaccines and Vaccination (214496)

Julia Wu

Jaap Goudsmit

2021 Spring (2.5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 30

Vaccines are considered one of the greatest global public health achievements. This course will provide students with broad knowledge and integrative skills related to the interdisciplinary topics in vaccines and vaccine programs. The course is organized around four main themes: 1) biology and applications of vaccines; 2) world-wide vaccination programs and their global health impact; 3) research, development and evaluation of vaccines; 4) surveillance and strategies for vaccination coverage. We will heavily focus on vaccines and vaccination programs that are currently in use globally, emphasizing their efficacy, effectiveness, safety and overall impact to the countries, as well as issues surrounding social acceptance and cultural environment. We use extensive case discussions and activities to interweave through these four themes with an aim of solidifying and synthesizing knowledge and skills from across disciplines involved in these topics.

Epidemiologic and Biostatistical Methods for Global Health (203320)

Marcello Pagano

Mary Kay Smith-Fawzi

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 40

The course will cover introductory level epidemiology and related biostatistical principles and methods, with a specific focus on problems related to global health. Instruction will also be offered in using the statistical software package Stata for calculating descriptive statistics, generating epidemiologic measures of association, and analyzing data at a basic level for monitoring and evaluation of global health programs. A key difference in this course compared with other introductory level courses in epidemiology and biostatistics is that it offers examples from global health to illustrate epidemiologic methods and statistical approaches.

In addition, the development of a project proposal that runs parallel to the basic foundation of epidemiology and biostatistics will be conducted to allow for immediate practical application of the concepts learned. At the conclusion of the course, students will have learned how to apply basic epidemiologic methods to

evaluate global health programs and to critically analyze literature focused on global health problems for the purpose of advancing program design and service provision that is evidence-based. Although there are no formal prerequisites, this course is intended for students with some prior experience in international or global health.

Requirements: **Class restricted to students in the GHDI program. Any other interested students must submit an instructor permission request.**

Methods for Mediation and Interaction (190826)

Linda Valeri

2018 Spring (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 70

The course will approach concepts and methods for mediation and interaction from the perspective of the counterfactual framework. The first part of the course will be concerned with mediation analysis, that is assessing the extent to which the effect of an exposure on some outcome is mediated through a particular intermediate and the extent to which it is direct or through other pathways. Definitions, theoretical identification results and statistical techniques related to mediation analysis will be covered. The material in this part of the course will clarify the assumptions required for the estimation of direct and indirect effect and will extend the approach to mediation typically employed in epidemiology and the social sciences to settings with interactions, non-linearities and time-varying exposures. The second part of the course will cover concepts and methods for interaction. Conceptual issues concerning interaction, effect modification and the relation and non-correspondence of statistical and mechanistic notions of interaction will be discussed. Empirical tests for biologic synergism and genetic epistasis will be discussed along with practical methods to implement such tests. Attention will be given to power and sample size calculations for interaction analyses and to assessing interaction in a variety of study designs including cohort, case-control, case-only, family-based and GWAS designs. If time permits, the course will conclude by offering an introduction to casual inference methods for addressing problems of social interaction, interference and spillover effects which arise in settings in which the exposure of one individual may affect the outcomes of other individuals. Prerequisites can be waived at the instructor's discretion.
Course Prerequisite(s): EPI289 or EPI207 or BIO291

Requirements: **HSPH: ID542**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Subject: Women, Gender & Health

Women, Gender & Health 211 Section: 01

Gender and Health: Introductory Perspectives (191279)

Brittany Charlton

Jacquelyn Caglia

2017 Fall (2.5 Credits) **Schedule:** F 0200 PM - 0450 PM

Instructor Permissions: None **Enrollment Cap:** 40

This course will introduce students to gender as a theoretical concept and a category of analysis in public health - specifically, the ways in which gender contributes to differentially structuring women and men's experiences of health. The course proposes to answer such questions as: How can understanding gender structures help us interpret public health research? How has gender influenced the construction of public health in diverse societies? How do our social frameworks and structures, such as gender, affect people's experiences and expectations of health? How is the success of behavioral change interventions and the validity of basic behavioral and evaluation research affected by gender?

This course is designed for students who wish to enhance their understanding of the social and cultural factors that have influenced the development of individual and societal health. The interactions between gender, class, race/ethnicity, and sexuality will be emphasized.

The course will cover a broad range of health issues for which gender has been of special importance.

Topics covered include: reproductive health; sexual health and sexuality; mental health; violence; occupational health and work; environmental health and pollution; and chronic diseases. Issues relating to the distribution of health, disease, and well-being will be addressed across sessions. Additionally, sessions will include global, US domestic, and historical perspectives, with attention paid to both epidemiologic investigation, social and behavioral sciences, and health policy dimensions.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Independent Study (191282)

Stacey Missmer

2017 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of regular courses.

Additional Course Attributes:

Global Health and Population

Subject: Global Health & Population

Global Health & Population 201 Section: 1

Advanced Modeling for Health System Analysis & Priority Setting (207842)

Stephane Verguet

2021 Spring (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: Instructor **Enrollment Cap:** 14

This course directly builds on GHP 501, and offers advanced methods for modeling for health system analysis and priority setting in global health. Students will apply a range of techniques to address central topics, including: health disparities; medical impoverishment and financial risk protection; economic evaluations for health policy assessment; health system modeling; health system performance and country performance on health.

Through readings, basic programming using R software (www.r-project.org), and research projects, students will develop their research skills around three main areas of application, with an emphasis on low- and middle-income countries:

I. Economic evaluation for health policy assessment
II. Health system modeling
III. Efficiency, equity, and performance

Course Note: There will be a required one-hour lab session that meets once per week. The exact day and time of this lab session will be determined during the first week of class. Instructor permission is required for enrollment. Students who wish to enroll must request instructor permission in my.Harvard. Please include the following information in the comment box: name, academic department and degree program, an explanation of how you will benefit from taking this course, and the relevance to individual career path and/or research plans.

Requirements: **Prerequisite: GHP 501**

Additional Course Attributes:

Comparative Health Systems I (211164)

Winnie Yip

2021 Spring (2.5 Credits) **Schedule:** MW 0800 PM - 0930 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course is the first in a two-course series on comparative health systems. The course will introduce students to theoretical health systems frameworks as well as essential concepts and methodological issues in comparative health systems research. In particular, the course uses theories of the market and the government as organizing principles throughout. The first part of the course will focus on (i) health systems frameworks and performance assessment, (ii) theories of market and market failures, (iii) theories of government and government failures, and (iv) approaches to comparative case studies and health system analysis. The second part of the course applies concepts and methods in the first part of the course to analyze different types of health systems and compares their performance.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Attribute	Value(s)

Comparative Health Systems Part II (214479)

Winnie Yip

2021 Spring (2.5 Credits) **Schedule:** MW 0800 PM - 0930 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

GHP 203 is the second course in a two-course series on comparative health systems. The course will introduce students to theoretical health systems frameworks as well as essential concepts and methodological issues in comparative health systems research. In particular, the two-course series uses theories of the market and the government as organizing principles to compare and contrast different health systems. The first part of the series introduces health systems frameworks, theori13s of market and market failures, theories of government and government failures, and approaches to comparative case studies and health system analysis and demonstrates their applications in high-income settings. The second part will focus on the theory of financing, benefit package design, provider payment methods, organization of health service delivery systems and their applications in low- and middle-income country settings.

Requirements: **HSPH PreReq GHP 202**

Global Health & Population 204 Section: 1

Foundations of Global Mental Health (211165)

Vikram Patel

Shekhar Saxena

2021 Spring (2.5 Credits) **Schedule:** TR 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 50

The course is an introduction to the field of global mental health. The curriculum is informed by the Lancet Commission on Global Mental Health & Sustainable Development (2018) (https://www.thelancet.com/commissions/global-mental-health) which proposed a reframing of mental health in three key ways: adopting a dimensional approach to mental health; recognizing the convergence of social and biological determinants in the emergence of mental health problems; and realizing a rights based approach to mental health care. The curriculum takes a life course approach and focuses on determinants and risk factors for mental health within a public health framework. Besides the two instructors, who were the lead authors of the Commission, the course includes a selection of leading experts as guest instructors for specific sessions. Along with the "Case Studies in Global Mental Health Delivery" course offered in Spring 2, this course forms the core of the interdisciplinary concentration in Population Mental Health at Harvard T.H. Chan School of Public Health (https://www.hsph.harvard.edu/population-mental-health/). This course is cross-listed at Harvard Medical School.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Foundations of Global Mental Health (211165)

Vikram Patel

2019 Fall (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 50

The course is intended to cover the key role of mental health in the context of the Sustainable Development Goals, which have recognized mental health explicitly in two of the health goal targets and implicitly in several others (such as universal health coverage and conflict). The course curriculum is informed by the publication of the Lancet Commission on Global Mental Health & Sustainable Development, which has proposed a theoretical reframing of mental health and series of innovative actions to achieve the aspirations of the SDGs in relation to mental health. Along with the "Case Studies in Global Mental Health Delivery" course offered in Spring 2, this course will form the core of a proposed Global Mental Health Intensive Fellowship program at HSPH, in collaboration with HMS. This course is cross-listed at Harvard

Medical School.

Risk Factors and Population Health (206843)

Goodarz Danaei

2021 Spring (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM
F 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 30

This course covers the concepts and methods required to estimate the effect of risk factors or interventions on disease outcomes at the population level. The course will cover three major topics of estimating population exposure, determining effect sizes, and estimating the proportional and absolute effects of changes in risk factor distributions on the corresponding disease outcomes. Knowledge of

intermediate epidemiology and biostatistics is required. Students will work in small groups on a project during the course and will implement the analysis using real data to estimate the impact of one or more risk factors on a selected disease outcome in a population. The course uses active learning teaching methods and students are required to do in-class activities.

Prerequisites: EPI 201, EPI 202, and one of the following: BST 210, BST 211, BST 213, GHP 525, S052 (GSE) or S030 (GSE), or instructor permission.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | PHS GHP, GHP SM2

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Prerequisite: EPI 201, EPI 202, and one of the following: BST 210, BST 211, BST 213, GHP 525, S-052 (GSE) or S-030 (GSE), or instructor permission.**

Case Studies in Global Mental Health Delivery (207560)

Vikram Patel

Shekhar Saxena

Giuseppe Raviola

2021 Spring (2.5 Credits) **Schedule:** MW 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 50

Case Studies in Global Mental Health Delivery was launched during the 2018-2019 academic year, as part of a new initiative on global mental health and sustainable development at Harvard. This initiative is intended to foster a community of students and faculty who are passionate about promoting a broad perspective on mental health as a fundamental public good and a universal human right, as captured in the United Nations' Sustainable Development Goals and a forthcoming Lancet Commission on this topic. The agenda is to promote an inter-disciplinary life course approach to promoting mental health, preventing mental disorders and enabling the recovery from mental disorders, through a combination of teaching, technical consultancy, building a community of students and faculty, and collaborative research.

The Case Studies course aims to present a diverse array of programs demonstrating how interventions for prevention, treatment and recovery across the life course are delivered in real-world settings in both low and high-income countries. The overall goal is to demonstrate how the core principles of access, equity, evidence and scalability are addressed in each case, to understand the barriers in the implementation of the intervention and the innovative strategies used to address them, and the learnings from the successes and failures of these efforts. For case studies in the greater Boston area, we may also offer students an opportunity for the session to be conducted 'on-site'. We anticipate a selection of Case Studies that illustrate these diverse principles and objectives, and facilitate learning how similar programs may be run in diverse contexts. Classes will be primarily discussion-based, and students will be expected to read the case studies and any relevant readings in advance. The course is cross-listed with Harvard Medical School.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Course Category	Category 3: Essential Course

Case Studies in Global Mental Health Delivery (207560)

Vikram Patel

Shekhar Saxena

2020 Spring (2.5 Credits) **Schedule:** MW 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 50

Case Studies in Global Mental Health Delivery was launched during the 2018-2019 academic year, as part of a new initiative on global mental health and sustainable development at Harvard. This initiative is intended to foster a community of students and faculty who are passionate about promoting a broad perspective on mental health as a fundamental public good and a universal human right, as captured in the United Nations' Sustainable Development Goals and a forthcoming Lancet Commission on this topic. The agenda is to promote an inter-disciplinary life course approach to promoting mental health, preventing mental disorders and enabling the recovery from mental disorders, through a combination of teaching, technical consultancy, building a community of students and faculty, and collaborative research.

The Case Studies course aims to present a diverse array of programs demonstrating how interventions for prevention, treatment and recovery across the life course are delivered in real-world settings in both low and high-income countries. The overall goal is to demonstrate how the core principles of access, equity, evidence and scalability are addressed in each case, to understand the barriers in the implementation of the intervention and the innovative strategies used to address them, and the learnings from the successes and failures of these efforts. For case studies in the greater Boston area, we may also offer students an opportunity for the session to be conducted 'on-site'. We anticipate a selection of Case Studies that illustrate these diverse principles and objectives, and facilitate learning how similar programs may be run in diverse contexts. Classes will be primarily discussion-based, and students will be expected to read the case studies and any relevant readings in advance. The course is cross-listed with Harvard Medical School.

Class Notes: **GHP 208 will meet in FXB-G13.**
